

How To Install Your Solar Panel

Step 1: Turn solar panel over and line up the pipe to the center. Place u-brackets on pipe to connect pipe with panel.

Step 2: Screw u-brackets onto panel with the included self-tapping short screws. Be sure to use a 5/16" hex bit in your screwdriver.

Step 3: If you need to add additional wire, use wire nuts to tie the red ends together and the black ends together.

Step 4: Use remaining u-brackets and self-tapping screws to attach panel to the surface of your choice. Enjoy!
